

# SWAN PYAE AUNG

Bangkok, Thailand — Open to Remote / Relocation

+66 65-085-8694 — swanpyaex03@gmail.com — LinkedIn — GitHub — Portfolio Website

## EDUCATION

### Rangsit University

B.Sc. Information and Communication Technology (First-Class Honours)

Dec. 2022 – Dec 2025

Bangkok, Thailand

## RELEVANT COURSEWORK

Data Structures, Database Systems, Object-Oriented Programming, Full-Stack Development

## EXPERIENCE

### FPT Software (Client Project: NXP Semiconductors)

July 2025 – October 2025

Software Engineer Intern

Remote

- Maintained Jenkins-based CI/CD pipelines for containerized builds using Docker, supporting automated testing and integration workflows.
- Investigated build failures and runtime defects through log analysis and containerized test environments, improving deployment stability across development branches.
- Collaborated with embedded, QA, and front-end teams during 2-week Agile sprints to track integration risks and support structured release cycles.
- Managed Git-based workflows including pull requests, branch validation, and merge checks to ensure consistent build automation and reduce regression risks.

## PROJECTS

### AI Powered Job Board (Live) — React, Next.js, TypeScript, Node.js, Express, PostgreSQL, REST API

August 2025

- Engineered a full-stack job marketplace platform supporting user authentication, role-based access control, and job listing management.
- Developed 15+ REST API endpoints for authentication, job filtering, pagination, and employer dashboard functionality.
- Containerized and deployed the application using Docker with environment-based configuration for production builds.
- Modeled normalized PostgreSQL schemas with foreign keys and indexed queries to ensure reliable data relationships and efficient lookups.

### Hotel Self Check-In System (ERP Workflow Hackathon – CiMSO ERP) — Flutter, Android Studio

September 2024

- Implemented mobile UI screens and interactive form flows based on functional requirements, ensuring intuitive navigation and clear user feedback.
- Reduced user input errors by 75% by redesigning validation logic and adding real-time front-end validation feedback.
- Conducted unit and user testing with 30+ trial users, iterating on UI improvements to enhance usability and reliability.
- Applied object-oriented principles to structure maintainable, modular front-end components.

### University Pickup FAQ System — HTML, CSS, JavaScript, Gemini API

January 2024

- Integrated external APIs and implemented structured response validation to ensure consistent data formatting.
- Implemented robust error handling for timeouts, malformed responses, and upstream service failures.
- Managed asynchronous HTTP request lifecycles to prevent UI blocking and ensure stable client-server interaction.
- Validated input/output payloads to prevent malformed request propagation and maintain system reliability.

## TECHNICAL SKILLS

- **Front-end:** React, Next.js, Flutter, HTML5, CSS3, JavaScript, TypeScript
- **Back-end:** Node.js, Express, Python, REST APIs, Authentication (JWT, Clerk)
- **Databases:** PostgreSQL, Prisma ORM
- **DevOps & Cloud:** Docker, Jenkins, CI/CD Pipelines, Nexus, AWS (S3)
- **Testing & QA:** Playwright (E2E Testing), Unit Testing, CI Validation, Integration Testing
- **Collaboration:** Agile/Scrum, Jira
- **Version Control:** Git, GitHub, GitLab

## LEADERSHIP / EXTRACURRICULAR

### Technology Seminar Organization

September 2024 – April 2025

President & Organizing Lead

Rangsit University

- Administered a 20-member cross-functional team, coordinating with external speakers and university departments to plan and execute technical seminars.
- Managed planning timelines, stakeholder communication, and logistics to ensure on-time event delivery.
